

Functional safety
from one single source

Testing is our Passion

As an independent testing institution, we are specialized in testing embedded systems for function and quality and thus ensuring their functional safety as early as during the development process.

Whether consultation, implementation or customized testing tools: we provide you with all means of product protection from one single source.

In this regard, we are not satisfied with just working on the current state of art level but are already developing testing solutions for tomorrow's issues in cooperation with experienced partners from the fields of science and technology.

Feel free to test our services and allow yourself to be convinced by our great expertise and experience in this field.

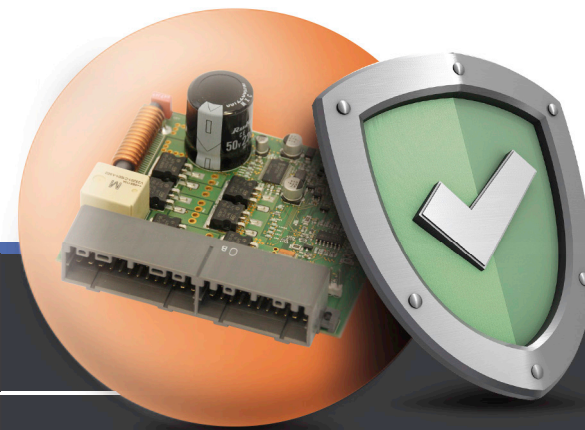

Services

It is our goal to support you throughout the whole development process for software as well as hardware, assuring function and quality of your products. All necessary test activities such as planning, management, implementation and reporting can be carried out by us. We meet your demands in an open and constructive manner and integrate ourselves as well as the suitable tools into your development process. We also create the perfect customized test solution for you because that is what we are specialized in.

Products

Innovation is what we aspire, in product development, too. To this end, we continuously reach out to further develop and expand our existing portfolio, including modular hardware and software test systems as well as individually applicable test components and our intuitive test automation.

You can rely on us, our innovative products, and their operation as well as our cost-effectiveness.

...everything from a single source

iSyst stands for making the most out of exploiting synergies: an effective combination of test systems, precisely-fitting test tools and corresponding test services are our specialty - in the area of hardware as well as when it

comes to software testing. To this end, we use our own product portfolio and complement it with suitable solutions from our network partners.

Network

Additional to our own specialized experts and all-rounders we can rely on an extensive network with partners from the academic landscape, research and industry.

This network provides us - and you - with a wide range of knowledge and additional products as well as innovative solutions. It is our goal to satisfy our customer's individual and diverse demands in a target-oriented and comprehensive manner.

We provide you with all means of product protection - structured from one single source.

Research

Further development does not spare the world of testing. As an initiator we are already working on innovative solutions for tomorrow's issues.

We are not satisfied with just working on the current state of art level but are constantly involved in research and funding projects. In this regard, we develop new testing methods and solutions for embedded systems and aim at quickly implementing the progressive research results into practical work.

For you and your questions regarding tests, now and in the future!

Employees:

The backbone of the iSyst GmbH

At iSyst, it is not only the big picture that is important, but also every single individual. Through honest and respectful interaction within the company, we create an open working atmosphere, where employees can, and should, pose ideas and suggestions in ways which are both creative and target-oriented. Only with the special knowledge, commitment, motivation and inventiveness of each individual employee can we reach

common goals and achieve sustainable success.

Our international team consists of graduates, engineers, employees with a highly versatile set of skills, as well as experts with many years of experience. We rise to the diverse challenges of our customers in a constructive team effort, and develop innovative and customized solutions.

Curious?

We would love to give you more detailed information and answer your questions.

Feel free to contact us at any time via email, telephone or - even better - in person.

We are looking forward to meeting you!
